

Comic Generation & Preview

6.3 Comic Generation Process

The backend first creates a structured outline with Gemini Flash, expands it using Gemini Pro, and generates illustrations with Stable Diffusion. Each panel is synchronized with the story to ensure consistency.

Workflow

Input → Outline → Story Expansion → Image Generation → Layout Assembly → Preview

6.4 Comic Preview

The preview page displays panel number, title, illustration, scene description, narration, and dialogue. Users can verify the output before exporting.
