

Implementation Overview

6.1 Implementation Overview

ComicCraft follows a modular architecture integrating a FastAPI backend, Gemini AI models, Stable Diffusion, and a web frontend. The backend orchestrates request handling, AI communication, image generation, and PDF creation. The modular design improves maintainability, scalability, and future enhancements.

Key Features

- Modular architecture
- FastAPI-based REST services
- AI-assisted content generation
- Automated workflow management
- Scalable implementation

6.2 Home Page

The homepage collects the story prompt, main character name, setting, tone, and preferred art style. A clean interface minimizes user effort and provides an accessible experience for both technical and non-technical users.
