

Project Demonstration & Results

Demonstration Overview

The application was demonstrated in a live environment by generating comics from user prompts. All major modules executed successfully from input collection to PDF export.

Workflow

User Input → Story Outline → Narration → Image Generation → Comic Preview → PDF Export

Key Features

AI-powered story generation, comic illustrations, structured preview, downloadable PDF, responsive interface.

Results

The system generated coherent stories, visually appealing illustrations, and professionally formatted PDFs while maintaining smooth interaction between all modules.

Applications

Educational storytelling, entertainment, digital comics, AI-assisted content creation.
