

Project Overview & Objectives

Introduction

Artificial Intelligence has transformed digital content creation. ComicCraft is an AI-powered web application that combines Google's Gemini models, Stable Diffusion, FastAPI, HTML, CSS and Jinja2 to generate personalized comic stories and illustrations from simple prompts. Its modular architecture separates story generation, image generation, layout creation and PDF export, making the system maintainable and scalable.

Objectives

- Design an interactive web interface.
- Generate comic outlines using Gemini Flash.
- Produce narration with Gemini Pro.
- Generate illustrations using Stable Diffusion.
- Organize panels into a comic layout.
- Preview and export comics as PDF.

Project Scope

ComicCraft demonstrates the practical use of Generative AI for creative storytelling while providing a simple user experience.
