

ComicCraft: AI-Powered Comic Story Generator

Functional Requirements

2.3 Project Features

ComicCraft offers several features that make comic generation simple and user-friendly.

The major features include:

AI-based comic story generation from user prompts.

Customization of character name, setting, tone, and art style.

Automatic generation of five-panel comic stories.

AI-generated comic illustrations for every panel.

Dynamic comic preview using Jinja2 templates.

PDF export for offline viewing and sharing.

FastAPI-based backend with a clean and responsive web interface.

Modular architecture that allows easy maintenance and future enhancements. These features correspond to the application's described functionality
