

Backend Development Module

Introduction: Backend processes prompts, coordinates AI, manages images and PDF export.

Objectives: Process requests, generate stories, coordinate image generation, manage APIs.

Technologies: Python, Flask, REST API, JSON, Pillow, ReportLab.

Architecture: API Controller, Story Engine, Image Module, PDF Module.

Workflow: Receive prompt → Validate → Story → Images → Assemble → PDF → Response.

API Endpoints: /generate-story, /generate-images, /preview, /export-pdf.

Error Handling: Validation, exceptions, timeouts, logging.

Optimizations: Efficient API calls, caching, async processing.

Advantages: Modular, scalable, secure, maintainable.

Conclusion: Central processing unit enabling AI-powered comic generation.
