

Frontend Development Module

Introduction: The Frontend Development Module creates an interactive UI for ComicCraft, allowing users to enter prompts, preview comics, and export PDFs.

Objectives: Responsive UI, collect inputs, preview comics, integrate backend APIs, accessibility.

Technologies: React.js, HTML5, CSS3, JavaScript, Tailwind CSS, Axios.

User Interface Components: Home Page, Story Prompt Form, Preview Section, Export Section.

Workflow: Input → Validation → Backend API → Loading → Render → Download.

Features: Responsive navigation, prompt editor, theme selection, preview, loading, error handling, download.

Advantages: Clean interface, responsive, fast integration, improved UX.

Conclusion: Provides an intuitive interface for efficient comic creation.
